turicode is developing the next-generation document digitalization technology. We enable companies from various industries to automatically process valuable information from documents using Machine Learning. Become part of a young growing team and join us as:

## **Programming Talent (60-100%)**

We are looking for a backend engineer to join our technical team who has an immediate impact on our product. As part of our technical project team, you will deliver solutions directly to our customers. Your main tasks consist of designing, implementing and testing new services based on our in-house purpose-built data retrieval engine.

### **Additional Responsibilities**

- Help transitioning customer projects into production including release management
- Provide first-level support for customers and ensure feedback loop with backend infrastructure

### **Qualifications**

#### Required

- Degree in Computer Science, Mathematics or Mechanical Engineering
- Good knowledge of C#, TypeScript and SQL
- Passionate about programming and high-quality software

#### Preferred

- Familiarity with a functional programming language (e.g. Haskell, F#, Scala)
- Knowledge of Machine Learning with Python

#### Bonus

- Communication skills in German

### **Benefits**

- Work for a growing startup with recurring revenues and a solid customer base
- Be part of a tech-savvy development team and enjoy a high degree of personal flexibility
- Join a highly motivated and international team to build a successful and sustainable company
