Front-End Application Development

About us

turicode develops an innovative SaaS application to digitize documents based on machine learning. We enable companies to read, understand and use valuable information from documents for automated processing and analysis. We believe that digital solutions are useful when technology and user needs merge.

Therefore, we rely on a flat hierarchy and an open and honest feedback culture. For our experienced development team, we are looking for exceptional talents like you.

Your new role

Together with your colleagues from the development team you will work on customer-oriented solutions. You design and implement powerful, yet intuitive user-interfaces. Thereby, you apply your skills to both rapid prototyping and the development of long-term sustainable systems. You contribute the user interfaces to the innovation happening at the cross-section of research and industry.

This job is for you if you

- Have expertise in designing innovative user experiences
- Have strong practical skills, ideally with experience in the following technologies/topics:
 - HTML, CSS and TypeScript
 - UX/UI design
 - C#, databases, UI frameworks (Angular in particular)
 - Continuous integration and delivery tools
- Thrive in an independent, yet highly cooperative environment
- Have a work permit for Switzerland (citizenship in the EU or an EFTA state).

Goodies & advantages

- Flexible working style (80% or more, part-time home office possible).
- Working in the international and vibrant environment of the start-up scene.
- Steep learning curve.
- Our young but experienced team will involve you in the joint responsibility from day one.

Interested?

We look forward to receiving your complete application documents (CV, job references, repositories) via recruitment@turicode.com.
